

PRESS RELEASE

OPNsense® “Legendary Lion” introduces major OS upgrade

Secure Your Network with ease

Middelharnis, the Netherlands, July 30th, 2020

[Deciso](#)® announces the immediate availability of OPNsense® 20.7 named “Legendary Lion”.

The latest release comes with HardenedBSD 12.1 at its core, bringing numerous improvements, updated drivers and packages.

Besides the major operating system upgrade, it also includes new updates that make managing and troubleshooting the system a lot easier. Included are the new netstat tree viewer, a full rewrite of the shaper status page and the all new - easily accessible - filters in the firewall live log.

The Lion stands for strength and bravery, being king of the animal world he protects its territory while usually being part of a group / a pride. OPNsense is similarly protecting your network, where its strong open source community makes for its pride.

OPNsense is the fastest growing open source security platform with an [Open Source Initiative](#) (OSI) approved 2-clause or simplified BSD license. Its feature set is extensive and ranges from router/firewall to inline intrusion detection and prevention.

It is the only open source product that comes with the highly valued Proofpoint® ET Pro ruleset at no cost in the form of the [ET Pro Telemetry edition](#).

The project is defined by its innovation through modularizing and hardening, simple and reliable firmware upgrades, multi-language support, [HardenedBSD](#) security, fast adoption of upstream software updates as well as a large and friendly community.

Version 20.7 makes reinstalling plugins much easier by providing a simple button at the plugin page. At the same time new plugins are introduced such as the basic firewall API plugin.

With the “Legendary Lion”, the developer’s documentation has also been updated to include an explanation to API enable standard services and the PHP coding style has been expanded to PSR-12.

As with every release, the latest security patches have been applied and the latest component versions have been included.

The mission to make OPNsense the most widely used open source security platform is well on its way.

Deciso is the company that founded the OPNsense project and offers turnkey solutions as well as commercial support and services.

About Deciso

Deciso B.V. is a global manufacturer of networking equipment. The company designs and produces complete products for integrators, oems and resellers.
